

GT Series Ultra Zero Air Generator

Description

The GC zero air generator produce dry and hydrocarbon-free air, using air from oil-free compressors, avoiding the need to use cumbersome cylinders.

The reduction of hydrocarbons, including methane, CO₂, NO_x, SO_x and carbon monoxide decrease the background noise level and gives the baseline much better stability, considerably increasing detector sensitivity and ensuring precise analytical results.

The GC only requires connection to a suitable oil free compressor.

Functioning principle:

The GC use 5 steps to transform ambient air into analytical grade air:

- the external oil-free compressor delivers air through a high efficiency filter that traps any particles that may damage the system. The filter has an automatic purge system, and traps oil, water and any other particles larger than 5 microns in size.
- Residual moisture and CO₂/CO molecules are removed by a dual active self regenerable molecular sieve system.
- An active charcoal filter removes specific molecules as NO_x, SO_x, ...
- The air leaving the filter enters a high temperature platinum catalyser, which through oxidation eliminates hydrocarbon molecules (including CH₄) down to < 0.1 ppm.
- A high efficiency filter is used to prevent any kind of particles from entering the instrument.

- Better detector performance
- Easy installation
- Lab safety
- Save money
- Improved lab efficiency

Applications

The ergonomic, compact and silent design makes the GC series generators the ideal solution for the following analytical applications:

- GC-FID
- GC-NPD
- GC-FPD
- GC-PFPD
- THA
- TOC
